

NexaRetail Business Findings Report

Business Observation 1 – Monthly Revenue Trend

Chart:

Month_Name	
January	3671930
February	4255000
March	3287310

April	3189090
May	3529240
June	4480260
July	5072420
August	4148900
September	4501790
October	4336160
November	3669390
December	3512460

Name: total_amount, dtype: int64

- Revenue increased after **May** and **peaked in July** (₹5,072,420), while **April** recorded the lowest revenue (₹3,189,090). This indicates strong mid-year seasonality and the need for proactive inventory planning.

Recommendation: Increase inventory and marketing before June–July and use promotions during lower-demand months.

Business Observation 2 – Offline Kirana Dominance

Chart:

- **Kirana stores** generated about ₹35.81 million compared with ₹11.85 million from supermarkets. **Offline sales** (₹33.61 million) substantially exceeded online sales (₹14.04 million), showing dependence on traditional retail channels.

Recommendation: Strengthen digital marketing and online fulfillment while maintaining Kirana partnerships.

Business Observation 3 – Product Return Analysis

Chart:

- **Atta** had the highest return rate (38.87%), while **Beverages** had the lowest (36.08%). Return rates were similar across channels and store types, suggesting product-level factors are more important.

Recommendation: Review product quality, packaging and supplier performance for high-return categories.

Conclusion

The analysis identifies seasonal demand, strong dependence on offline Kirana stores, and category-specific return patterns. These insights can help improve inventory planning, channel strategy, and product quality.
